Options and Applications for Guardrail Reflectors

High Impact Guardrail Mount Delineators

FG 427 and FG 527

The 427 and 527 are bright, high profile markers, measuring 27" in length and can accommodate 36 square inches of reflective sheeting. The 427 and 527 are effective at critical points along the roadway where vision can be partially restricted by hills, curves, deep snow and vegetation. Both markers can be mounted on wooden guardrail posts positioning the flexible reflectors 48" above the roadway surface.

FG 427

FG 527

Straight Guardrail Reflector

The straight marker measures 13" in length and provides excellent guardrail delineation for safer nighttime driving. This is a cost effective flexible marker that is easy to install on wooden guardrail posts.

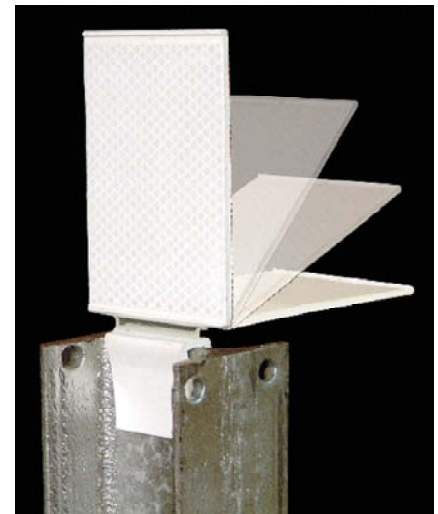

The Straight

I-Flex Guardrail Marker

The I-Flex fits over a steel I-beam guardrail post and contains an innovative built-in urethane hinge. The hinge allows the reflector to bend down and spring back into an upright position after an impact. This reflector will continue to rebound time after and time and protects your investment with reduced replacement and maintenance costs.

Reflective sheeting can be applied to both sides of the I-Flex enhancing visibility for motorists.

Options and Applications for Guardrail Reflectors

High Impact Guardrail Mount Delineators

Butterfly Bolt On and Glue On

The Butterfly is available in two styles, the bolt-on and the glue-on. The bolt-on style is best suited for installation during initial guardrail construction. The glue-on style can be used any time because installation does not require the loosening and re-tightening of existing guardrail bolts.

Butterflies are as bright as molded acrylic markers but won't shatter upon impact, they simply

Butterfly Bolt On & Glue On

flex. The trapezoidal shape of the Butterfly makes it a perfect fit inside all W-beam style guardrails. The bolt on style Butterfly can be installed with Adhesive 795A.

Adhesive 795A

A one-part, fast cure adhesive for bonding reflectors that requires no mixing and is effective over a broad range of temperatures. 795A has excellent weathering properties and offers a primer-less adhesion to concrete, steel and asphalt.

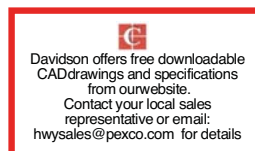

Fat Cat

The Fat Cat is an oversized guard rail marker measuring 4 x 15". There are multiple reflector size options and reflective tape can be applied on one or both sides of the marker. This is a durable and economical marker that provides an efficient way to delineate guardrails both day and night.

The Fat Cats size makes it easy to see in high-speed areas, work zones, dangerous curves and intersections. In addition, its larger size makes it much more visible in low light conditions.
