**PCBM Barrier Reflectors**  
High Impact Barrier Mount Delineators

"Creating Products to Save Lives"

PCBM-12 (AR)

## Davidson PCBM Barrier reflectors meet specifications nationwide

### Unbeatable Impact Resistance!

Why continue to install inferior barrier reflectors that shatter when you only need to install a PCBM once? Davidson's PCBM's (Portable Concrete Barrier Markers) were created to increase the visibility of both temporary and permanent concrete barriers.

### Injection Molded Reflectors

shatter when struck, losing all their reflectivity and brightness. Davidson barrier reflectors are virtually shatter proof and simply outshine the competition. Our PCBM barrier reflectors are made of high impact engineering grade thermoplastics. This allows our PCBM's to bend upon impact and rebound to their original shape. PCBM's resist both direct and indirect vehicle impacts, even in the coldest weather. Once installed, PCBM's keep working day after day and year after year.

### Amazing Reflectivity

PCBM's utilize highly efficient cube corner micro-prismatic sheeting which allows them to exceed both federal and state specifications. The clear and bright reflectivity of the PCBM provides motorists with extra response time at night, in the rain, fog, sleet or snow. This is especially important as the driving population begins to age. Adding a few seconds to a driver's response time increases safety on our highways.

### Quick Installation that Lasts for Years

The pre-drilled holes in the base of our markers combined with our specially formulated structural adhesive create both a chemical and physical bond. Adhesive mounting is superior to bolt or stud mounting because it is quicker, less labor intensive and just as durable.

A reliable bond means you don't have to go back and replace the marker because our marker stays right where it is placed. Speeding up the installation process reduces workers exposure to traffic and increases safety.

### Typical applications of PCBM's include:

- Delineation of temporary concrete barrier walls
- Delineation of permanent concrete barrier walls
- Delineation of concrete bridge parapets
- Delineation on top of wooden guardrail posts

### Protect your Investment

Protect the driving public and your investment in bridges and barrier walls! National Safety Council's Accident Facts shows that over 50 percent of all fatal accidents occur at night. On rainy nights, pavement markings and barrier walls become practically invisible. Adding delineation on these walls reduces accidents and prevents injuries.

***When conditions are the worst, our PCBM's are at their best.***

### Reflective Sheeting Options for PCBM's:

Our PCBM's are available with different grades of reflective sheeting to meet various delineation requirements: **Reflexite AR 1000** is super-high intensity prismatic retroreflective sheeting that is composed of cube corner microprisms bonded to a flexible smooth surface. AR 1000 is extremely bright, abrasion resistant and UV stable.

**Diamond Grade** is full cube retro reflective sheeting designed to have the highest reflectivity characteristics at medium and short road distances.

**High Intensity** sheeting is a durable encapsulated lens sheeting which is designed to provide bright delineation.
