**For Immediate Release**

## Spinner Base for Quick Channelizer Installation

**Tacoma, WA** - Davidson Traffic Control Products “rounds” out their offering of reliable channelizer posts with the introduction of the “**Spinner**”, a screw-in base for their new DP 200 channelizer post. The DP 200 is a 3-inch round polyurethane channelizer post that provides 360 degrees of durable delineation.

### Embedded Anchor

The DP 200 “**Spinner**” Base utilizes an embedded metal anchor in the roadway. An integral bolt in the base mates with the in-road anchor cup allowing a worker to quickly spin in the base. Damaged posts can similarly be quickly “spun out”, providing a maintenance-friendly traffic safety solution.

### Two Options for Installation

Either an embedded in-road anchor base – The Spinner Base – or a traditional glue-down/bolt-down base can be chosen for fixing the DP 200 post.

Key features & benefits of the DP 200 Channelizer Post are:

- ✓ Durable Thermoplastic Polyurethane for Impact Resistance
- ✓ Stands Up to Extreme Temperatures
- ✓ No Metal Parts to Rust or Seize
- ✓ 360° of Reflective Visibility
- ✓ Ultraviolet Resistant

- ✓ 1-Piece Post Construction
  - ✓ Simple Installation
  - ✓ MUTCD Compliant
- 
- Exclusive hand tighten "screw-on" cap.
  - Base cap is designed with eight rib handles for fast, secure tightening of cap to base.
  - No wrenches required.

The DP 200 is constructed of highly durable thermoplastic polyurethane that provides enhanced strength and durability. There are no metal parts to rust or seize which decreases maintenance time and replacement costs. The DP 200 is safer than heavier steel posts that often shear off after being struck. Like all the channelizer posts in the Davidson line, the DP 200 is sturdy and rebounds after being run over.

The DP 200 Series post is a 3-inch round channelizer made of polyurethane, the toughest flexible plastic available. The DP 200 remains extremely flexible, even at extreme temperatures and returns to an upright position after impact. It meets MUTCD requirements for channelizing devices, and the requirements of NCHRP 350.

#### **Easy to bend and quick to rebound**

Polyurethane plastics are able to bend easily and rebound quickly after being driven over

#### **High visibility reflective materials**

The reflective sheets and glass elements make it possible to guide the driver at night

#### **High resistance performance**

It has good resistance against calcium, chloride and other chemicals in snowy areas

Davidson Traffic Control Products is part of Pexco LLC, a global manufacturer of plastic products with decades of technical & engineering expertise. The Davidson Traffic product line includes Type I, II & III Barricades, Channelizer Posts, Curb System lane separators, Work Zone Pavement Markers, Flexible Delineator Posts, Reflectors for Barrier Walls and Guardrails, Snow Poles and many adhesive products that have gained worldwide acceptance.
