Options and Applications for PCBM Barrier Reflectors

PCBM-12
The most popular of our PCBM, for work zone traffic control or permanent delineation. It has over 12 square inches of reflective sheeting and the versatility of either top or side mount placement. The added brightness gives motorists additional response time when driving through hazardous areas day and night.

PCBM-T12
This popular barrier mount reflector features a built-in polyurethane hinge that provides tremendous flexibility and impact resistance.

PCBM-T9
The hinged version of the PCBM-9 is designed for use on top of movable barrier systems.

50mm Barrier Flex Tab
A flexible polyurethane marker mounts to moveable steel guardrail or median barrier walls for temporary or permanent installations. It features double-sided prismatic reflective sheeting and is available with or without factory applied adhesive pad. Also available in longer lengths.

Our unique “Gator Jaw” hinge allows the T12 reflector to take an impact and spring back to its full, upright position. This reduces maintenance and provides for long-lasting delineation.

PCBM-9
The most economical of Pexco’s barrier mount reflectors, the PCBM-9 meets the minimum MUTCD requirements for reflectivity with 9 square inches of reflective sheeting. The PCBM-9 can be used for top or side mount applications.
Big Dog PCBM
The Big Dog utilizes 96 square inches of fluorescent orange prismatic sheeting to provide more brightness than any other barrier reflector. This extra large top-mount reflector was designed for work zones where additional brightness is critical for guiding traffic.

PCBM-15
Used for top-mount installations in heavy snow regions because the 8 inch height places the reflector above the snow on the barrier wall.

PCBM-L16
The PCBM-L 16 is designed to create delineation that is 48 inches above the roadway, as required by many states. Pexco’s PCBM-L 16 is easily mounted on the top of a standard 32 inch barrier wall. The 3” x 12” reflector provides the same amount of visibility as that of our Flexi-Guide 400 and 500 roadside delineator posts.

Little Dog PCBM
The Little Dog PCBM provides incredible brightness with 72 inches of reflective sheeting. This smaller top-mount barrier reflector adds safety to hazardous traffic conditions.

PCBM-9HD
This centermount barrier reflector features either a single or double sided application of the HOT Dot and offers bright, impact resistant reflectivity where acrylic reflectors are traditionally used.

HOT Dot 3” Centermount Reflector
An abrasion and impact resistant centermount reflector. When impacted, the HOT Dot only dimples where acrylic reflectors will shatter. They never lose reflectivity due to water penetration and are available in 5 bright colors.
