

VINYLGUARD FOR BALL WASHER MOUNTING POSTS

No More Nicks, Scratches or Rust
No More Sanding and Painting
No More Costly Replacements

RENEW AND PROTECT YOUR BALL WASHER POSTS

Get a high gloss, freshly painted look that will last for years

- Made from the same rugged material with UV inhibitors as automobile body molding
- Attractive, extremely durable and easy-to-clean
- Easy to remove and replace

GETTING STARTED

Cut a piece of vinyl 2" longer than the post to allow for longitudinal shrinkage
Slide the material over the post, overlapping the bottom end

USE A HIGH TEMPERATURE HEAT GUN WITH A HEAVY-DUTY AIR BLOWER

- Hold the heat gun a few inches away from the material
- Keep the gun moving back and forth to prevent burning
- Do not apply heat directly to the crease

SLOWLY BEGIN SHRINKING

- Start at one end, shrink your way along the shaft, rotating the post while applying heat
- Apply sufficient heat to remove any wrinkles
- The vinyl will quickly shrink, tightly conforming to the post and will not loosen over time
- After shrinking trim the excess vinyl at the bottom with a sharp blade or utility knife
- If necessary trim the top so that the ball washer fits on the post

BW-2750 for Ball Washer Posts - 50 ft. per Spool

Specify the Color:

We recommend the high temperature **VT-1100** heat gun with a heavy duty air blower

WHAT'S BEING SAID...

"You've done your rakes and flagsticks, now renew your ball washer posts... in minutes, for just pennies. A great rainy day project." TurfNet
