TEMPORARY PEDESTRIAN ACCESS ROUTE (TPAR) **BARRICADE**

TYPE II BARRICADE FOR CONTINUOUS GUIDANCE IN WORK ZONES

1" X 8" TPAR PANEL
SHOWING I-BEAM CONSTRUCTION

Pexco's Temporary Pedestrian Access Route (TPAR)

Barricade is the Ideal Device for Safe Pedestrian Passage through Urban Work Zones

The TPAR Type II Barricade provides continuous, safe passage for pedestrians in work zones

Pexco's TPAR, Type II Barricade is an ADA and MUTCD 2024 compliant temporary traffic control device. It provides safe, continuous guidance for pedestrians through urban work zones. Components are quick to assemble and easy to store and transport.

TPAR Barricades are lightweight, UV-stabilized, offer superior strength and withstand all weather conditions and climates.

TPAR 1" x 8" panels from Pexco will not delaminate, break, splinter, rot, rust, crack or peel. Our quality assures long life in the field.

The X-tube upright posts are pre-drilled for easy assembly.

Latch on top of barricade keeps the hand trailing edge in alignment for smooth continuous detection.

The top and bottom barricade panel share a common vertical face and nothing protrudes into the walkway.

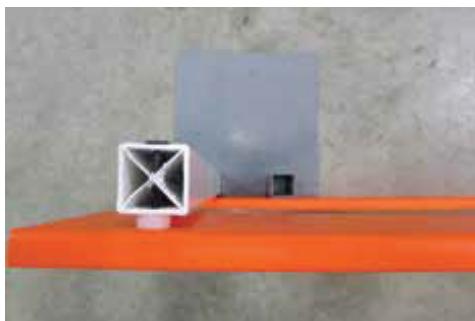

The bottom panel is 1.5" from the ground and acts as a detectable edge for pedestrians using canes.

Pexco's The TPAR Barricade is Light Weight, Compact, Easy to Transport and Versatile

The TPAR barricade can be used for manhole and utility protection. The hinge creates 90 degree angles for full or open squares. (Shown here with optional 3-panel assembly).

The TPAR Barricade has an extremely small footprint and only measures 15 inches from the back of the steel foot to the front of the lower panel. This maximizes the pedestrian walkway space AND the work zone area.

Standard white or optional fluorescent orange panels can be assembled to provide contrasting colors for improved visibility.

The barricades nest together for easy transport and storage.

Benefits

- Meets 2024 MUTCD 6K.02 and 6K.10
- MASH-16 approved to TL3 (WZ-418)
- TPAR panels come pre-drilled for easy assembly
- The top rail provides an easy-to-follow hand guide and smooth transition between panels
- The lower barricade rail allows for water drainage and acts as a guide for pedestrians who use a cane
- When fully assembled, the TPAR barricade creates a very narrow footprint of only 15 inches deep!
- TPAR panels are available in white or fluorescent orange
- Panels are available blank or with factory-applied retroreflective sheeting, in lengths of 4' or 6'
- The top and bottom barricade panels share a common vertical face with nothing protruding into the walkway, eliminating trip hazards
- TPAR Latch allows for a secure, seamless connection between barricades and easily unfastens with intentional pressure

Where Ideas Take Shape.

Our long history of creating solutions to help make our roadways safer is just one facet of Pexco's ongoing commitment to leadership in the markets we serve. All of our Traffic Safety products are proudly **MADE IN THE USA!** With multiple production and distribution facilities throughout the U.S. and abroad, we are able to serve our customers locally while reducing costs with **high-quality products and solutions.**

Traffic Safety and Control Products

- Channelizer Posts and Flexible Bollards
- Curb Systems & Lane Separators
- Roadside Delineation
- Barricade Products
- Pavement Markers
- Barrier Reflectors
- Guardrail Reflectors
- Snow Poles & Snow Posts
- Fasteners
- Pedestrian Safety Products
- Adhesives
