

SUPER TOM AND SUPER TRPM

6-INCH WIDE LANE LINE MARKERS FOR IMPROVED SAFETY AND MACHINE VISION

6-inch wide Super Bright TOMs and TRPMs

Improving Visibility and Safety

Wider and brighter pavement markings can enhance safety for older drivers and truckers in challenging conditions such as rain. They also are a better guide for autonomous vehicles.

Recent research shows that six-inch wide pavement markings are beneficial for human drivers in terms of lowering fatal and injury crashes on 2-way, 2-lane highways. In addition, recent studies have also provided evidence demonstrating that six-inch wide pavement markings provide improved detection for machine vision systems.

Why Use 6" Super TOMs and TRPMs?

An increasing number of states, including California, Illinois, Kansas and Michigan, have begun using 6-inch wide lines on their roadways. Why? Because 6-inch markings reduce the number of crashes overall, and most importantly reduce the number of fatal and severe crashes. Super TOMs not only match the move to wider lines, but also improve markings in construction and maintenance work zones, where greater visibility is most needed.

Factory-applied butyl pads keep markers in place and are easily removed

Preparing for Tomorrow's Machine Vision

Six-inch wide markings improve safety on rural 2-lane highways and prepare roadways for Automated Vehicles. Research has shown that 6-inch wide pavement markings can improve machine vision detection on high-speed roadways where potentially conflicting signals may inhibit systems from detecting pavement markings.

Addressing the Needs of Today's Drivers

Recent research has also shown that six-inch wide pavement markings are good for human drivers too, making for an ideal infrastructure-based solution in the "mixed-fleet" era.

Super TOM and TRPM Options

- Standard colors yellow and white
- Red "Wrong Way" reflector option
- Factory-applied adhesive pad
- "Stick and Stomp" installation
- Chip-seal version with cap available
- Packaged 200 pieces per box

Benefits

- Matches new 6" wide road stripes
- 50% increase in daytime visibility
- 500% increase in nighttime reflectivity
- Improves safety on 2-lane highways
- Increases advance detection of curves
- Improves performance of automated driving technologies
- Conforms to 6-inch markings used in 27 States
- Suitable for high ADT roadways
- Super TOM without covers for asphalt paving projects
- Super TRPM with covers for bituminous resurfacing projects
